

Background

Work with MemoCiS
team in Belgrade

Nano research group
at the Electronic and
Computer Science
department at the
University of
Southampton

STSM: System for Remote Characterisation of Memristors

I Server and client
created

II Server integration
to the software part of
the platform for
memristors
characterisation

III Remote commands
from a client to the
platform

IV Measured data
from the platform to
the client

V Remote commands
from the client to the
advanced modules of
the platform

MemoCiS STSM: Characterising memristors remotely: Towards an internet service for memristor-based application development
