# PHYSICS OF IONIZED GASES 1972

Proceedings of invited lectures given at the  
VI YUGOSLAV SYMPOSIUM AND SUMMER SCHOOL  
ON THE PHYSICS OF IONIZED GASES

Miljevac by Split, Yugoslavia  
July 16 — 21, 1972.

**Editor: M. V. Kurepa**  
Atomic and Molecular  
Physics Department

 Institute of  
Physics  
Beograd  
Yugoslavia

The Sixth Yugoslav Symposium  
and Summer School on the Physics of Ionized Gases

was organized by

The Institute of Physics, Beograd

and sponsored by

Republic Councils of Scientific Research  
of all Socialist Republics of Yugoslavia

The printing of this book  
was made possible by the financial support of

The Institute of Physics, Beograd

and

Republic Council of Scientific Research of the Socialist  
Republic of Serbia

Published by the Institute of Physics, Beograd, Yugoslavia  
in 1972.

Printed by Grafičko preduzeće BUDUĆNOST, Zrenjanin

Technical redaction by D. Ostojić

## LIST OF LECTURERS

Numbers in parentheses indicate the pages on which the author's contribution begin.

- L.T.Chadderton (305)  
Physical Laboratory II, H.C.Ørsted Institute,  
Copenhagen, Denmark
- J.J.Cowan (785)  
Ion Physics Laboratory, Boris Kidrich Institute, Vinča  
Beograd, Yugoslavia
- D.M.Davidović (105)  
Ion Physics Laboratory, Boris Kidrich Institute, Vinča  
Beograd, Yugoslavia
- H.W.Drawin (509) (705)  
Association EUROATOM-CEA, Department de la  
Physique du Plasma et de la Fusion Controlée,  
Fontenay-aux-Roses, France
- H.Edels (383) (419)  
Department of Electrical Engineering and  
Electronics, University of Liverpool,  
Liverpool, United Kingdom
- W.L.Fite (83)  
Department of Physics, University of Pittsburgh,  
Pittsburgh, USA
- D.W.O.Heddle (1) (25)  
Physics Department, University of York,  
York, United Kingdom
- V.Henč-Bartolić (777)

## P R E F A C E

This book contains invited lectures given at the VI Yugoslav Symposium and Summer School on the Physics of Ionized Gases, held in Miljevac by Split, Yugoslavia, in July 1972. This summer meeting of physicists working in the field of the physics of ionized gases was sponsored by Republic Councils of Scientific Research of Socialist Republics of Yugoslavia. The Institute of Physics, Beograd as the organizing institution of the meeting gave me all the support necessary during the preparation of the manuscript and the printing of this book. For the last stage, a financial support was also given by the Institute.

The edition of this book was made possible by the courtesy of the lecturers who kindly handled their manuscripts to the editor's disposal and to whom I express mine particular thanks. As the proofs of lectures which had to be retyped were not sent to the authors, the editor is therefore responsible for possible misprints and mistakes.

I believe that the book containing contributions of our distinguished invited lecturers will be valuable as a source book of the current knowledge in both the Physics of Ionized Gases, and the supporting fields of Atomic Collisions Physics and the Physics of Particle Interaction with Surfaces. I hope that for many graduate students this book will be helpful in the beginning of their professional career, and for experts it will be a possibility to improve the knowledge on particular subjects.

I would like to express my thanks to Mrs. M.Radosavljević and Mrs. J.Prodanović for making an excellent job of typing the text in an extremely short time period. My thanks are due also to Mr. D.Kosanović, the Managing Director of the Institute of Physics, in helping me during the preparation of the book and its printing.

Beograd, Yugoslavia  
December 1972.

Milan V. Kurepa

## CONTENTS

List of Lecturers	III
Preface	V
Contents	VII

Section 1 : ATOMIC COLLISION PROCESSES

PRECISION MEASUREMENTS OF OPTICAL EXCITATION FUNCTIONS	1
--	---

D.W.O.Heddle

- 1.Introduction
- 2.The measured photon flux
- 3.Secondary effects
- 4.The measurement of target gas density
- 5.The measurement of the photon flux
- 6.The electron beam
- 7.General considerations
- 8.Conclusions
- 9.References

THE NEAR-THRESHOLD BEHAVIOUR OF ELECTRON EXCITATION FUNCTIONS	25
---	----

J.M.Kurepa and D.W.O.Heddle

- 1.Introduction
- 2.Measurement with high energy resolution
- 3.The energy scale
- 4.References

SPIN POLARIZED ELECTRON BEAMS	37
-------------------------------	----

K.Jost

- 1.Methods for producing spin polarized electron beams
- 2.Figures of merit of a source of polarized electrons and detection of electron polarization
- 3.What can be learned by experiments involving polarized electrons
- 4.References

DIFFERENTIAL CROSS SECTIONS FOR ELASTIC SCATTERING OF ELECTRONS ON ATOMS	65
--	----

L.Đ.Vušković

- 1.Introduction
- 2.Experimental procedure
- 3.Calibration measurements
- 4.Differential cross section results in argon
- 5.Conclusion
- 6.References

COLLISIONS INVOLVING METAL ATOMS IN THE GAS PHASE	83
---	----

W.L.Fite

- 1.Introduction
- 2.General experimental considerations
- 3.Collisions of ions with metal atoms
- 4.Neutral-neutral collisions
- 5.Summary
- 6.References

EXCHANGE INTERACTION IN ATOMIC SYSTEMS WITH LOOSELY  
BOUND ELECTRONS

105

D.M. Davidović

1. Introduction
2. Term splitting in the near degenerate ( $A, B^-$ ) system at large internuclear separations
3. Calculation of the cross sections for some resonant and near resonant charge exchange reactions
4. References

## THE LANDAU-ZENER MODEL IN THE THEORY OF ATOMIC COLLISIONS

117

E.E. Nikitin

1. Introduction
2. Quasiclassical scattering amplitudes and scattering matrices
3. The linear two-state model of non-adiabatic coupling
4. Calculation of the total cross-section of inelastic collision in case of pseudocrossing
5. References

Section 2 : PARTICLE INTERACTION WITH SOLIDSSELECTED ASPECTS OF ION SCATTERING, ENERGY DEPOSITION  
AND SPUTTERING

137

P. Sigmund

1. Ion Scattering
2. Energy deposition
3. Theory of sputtering
4. References

THE ORIGIN OF BOMBARDMENT PHENOMENA AT THE SUBSTRATE  
SURFACE IN R.F. SPUTTERING SYSTEMS

197

G.N. Jackson

1. Introductions
2. Theory
3. Experimental results and discussion
4. Conclusion
5. References

INVESTIGATION OF SURFACE CHANGES INDUCED BY ION  
BOMBARDMENT

221

B. Navinček

1. Introduction
2. Surface change dependence on the total ion dose
3. Conclusions
4. References

## RANGE PROFILES

253

J.L. Whitton

1. Effect of crystal orientation
2. Effect of incident energy
3. Effect of lattice type
4. Effect of target temperature
5. Effect of changing  $Z_1$  (ion) and  $Z_2$  (target)
6. Effect of crystal disorder

7. Effect of bombardment dose
8. Effect of target temperature in semiconductors
9. Summary
10. Suggested future experiments
11. References

## MEASUREMENT OF RANGE PROFILES

283

J.L. Whitton

1. Sectioning methods
2. Techniques for the detection of implanted atoms
3. Summary
4. References

## DIRECTIONAL EFFECTS IN RADIATION INDUCED DAMAGE : IONS

305

L.T. Chadderton

1. Introduction
2. Defects and the slowing-down process
3. Channeling
4. The damaging process itself
5. Some experiments
6. Channeling as a tool
7. Some more experiments
8. Focusing
9. A sputtering experiment
10. Conclusion
11. References

## ION-IMPACT EFFECTS WITH OXIDES AT HIGH DOSES

349

R. Kelly

1. Introduction
2. Results at low and intermediate defect concentrations
3. Results at very high defect concentrations
4. Experimental methods
5. Explanation of the effects
6. References

Section 3 : PHENOMENA IN IONIZED GASES

## THE ARC DISCHARGE : STEADY STATE PROPERTIES

383

H. Edels

1. Introduction
2. Simple Arc Properties
3. The high pressure arc
4. The high vacuum arc
5. References

## THE ARC DISCHARGE : INTERRUPTION AND REIGNITION

419

H. Edels

1. Introduction
2. The high pressure arc
3. The high vacuum arc
4. References

## CALCULATION OF ARC PROPERTIES USING BALANCE EQUATION

441

J.Uhlenbusch

1. Basic Balance equations
2. Solution of the balance equation for the DC-arc of cylindrical symmetry
3. The solution of the balance equation for the AC-arc of cylindrical symmetry
4. Solution of the balance equations for arcs with flow fields and non-cylindrical geometries
5. Solution of the balance equations for arcs influenced by magnetic fields
6. References

## DETERMINATION OF TRANSPORT COEFFICIENTS FROM ARC MEASUREMENTS 479

J.Uhlenbusch

1. Arc device and experimental program
2. Theoretical background
3. Transport coefficients and balance equations
4. Comparison of experimental and theoretical results
5. References

INFLUENCE OF DIFFUSION ON PLASMA PARAMETERS :  
A QUALITATIVE ESTIMATE AND A PHYSICAL INTERPRETATION  
(Discussion Note)

509

H.W.Drawin

1. Introduction
2. Calculation of  $\delta$  and S for homogeneous quasi-stationary plasmas
3. Diffusion effect expressed in terms of  $\delta$  and S
4. Discussion
5. Conclusion

## EXPERIMENTAL STUDY OF STARK BROADENING OF IONS IN PLASMAS

521

J.Purić

1. Introduction
2. Griem's semiempirical formulas for width and shift of isolated ion lines
3. Experimental apparatus
4. Experimental procedure
5. Experimental results and discussion
6. Conclusion
7. References

EXPERIMENTAL STUDIES OF THE STARK BROADENING OF  
HYDROGEN LINES

559

W.L.Wiese

1. Introduction
2. Requirements for accurate Stark broadening studies of hydrogen
3. Review of the most significant recent experimental results.
4. References

## ARC PLASMAS AS RADIATION STANDARDS IN THE VACUUM ULTRAVIOLET 597

W.L.Wiese

1. Introduction
2. The principle of the hydrogen arc calibration technique
3. The calibration facility

4. Performance and test of the standard	
5. Uncertainties	
6. Outlook	
7. References	
<b>REGULARITIES IN ATOMIC OSCILLATOR STRENGTHS</b>	<b>627</b>
<b>W.L. Wiese</b>
